

TITANPred converts one COAD feature vector into a multi-endpoint molecular profile

Examples were selected for maximal continuous-profile separation; this internal TCGA demonstration is not external validation.

Example A (TCGA-AD-6964): MSI-, mutation-rate- and immune-high / aneuploidy-low. Example B (TCGA-5M-AAT5): aneuploidy-high / MSI- and immune-low. Binary scores are uncalibrated.
