

TITANPred converts one COAD feature vector into a multi-endpoint molecular profile

Both examples are male, sigmoid-colon, grade-2 pT3 adenocarcinomas with clear margins; the pair was selected after limiting profile saturation.

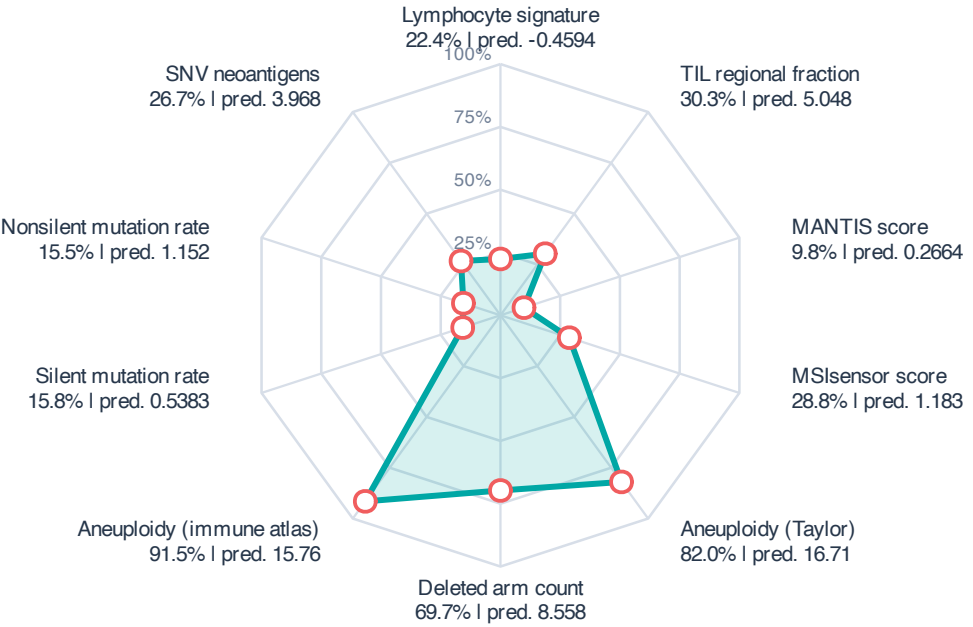

A Example A - TCGA-AA-A01F

All 10 continuous predictions; exact values at radar corners

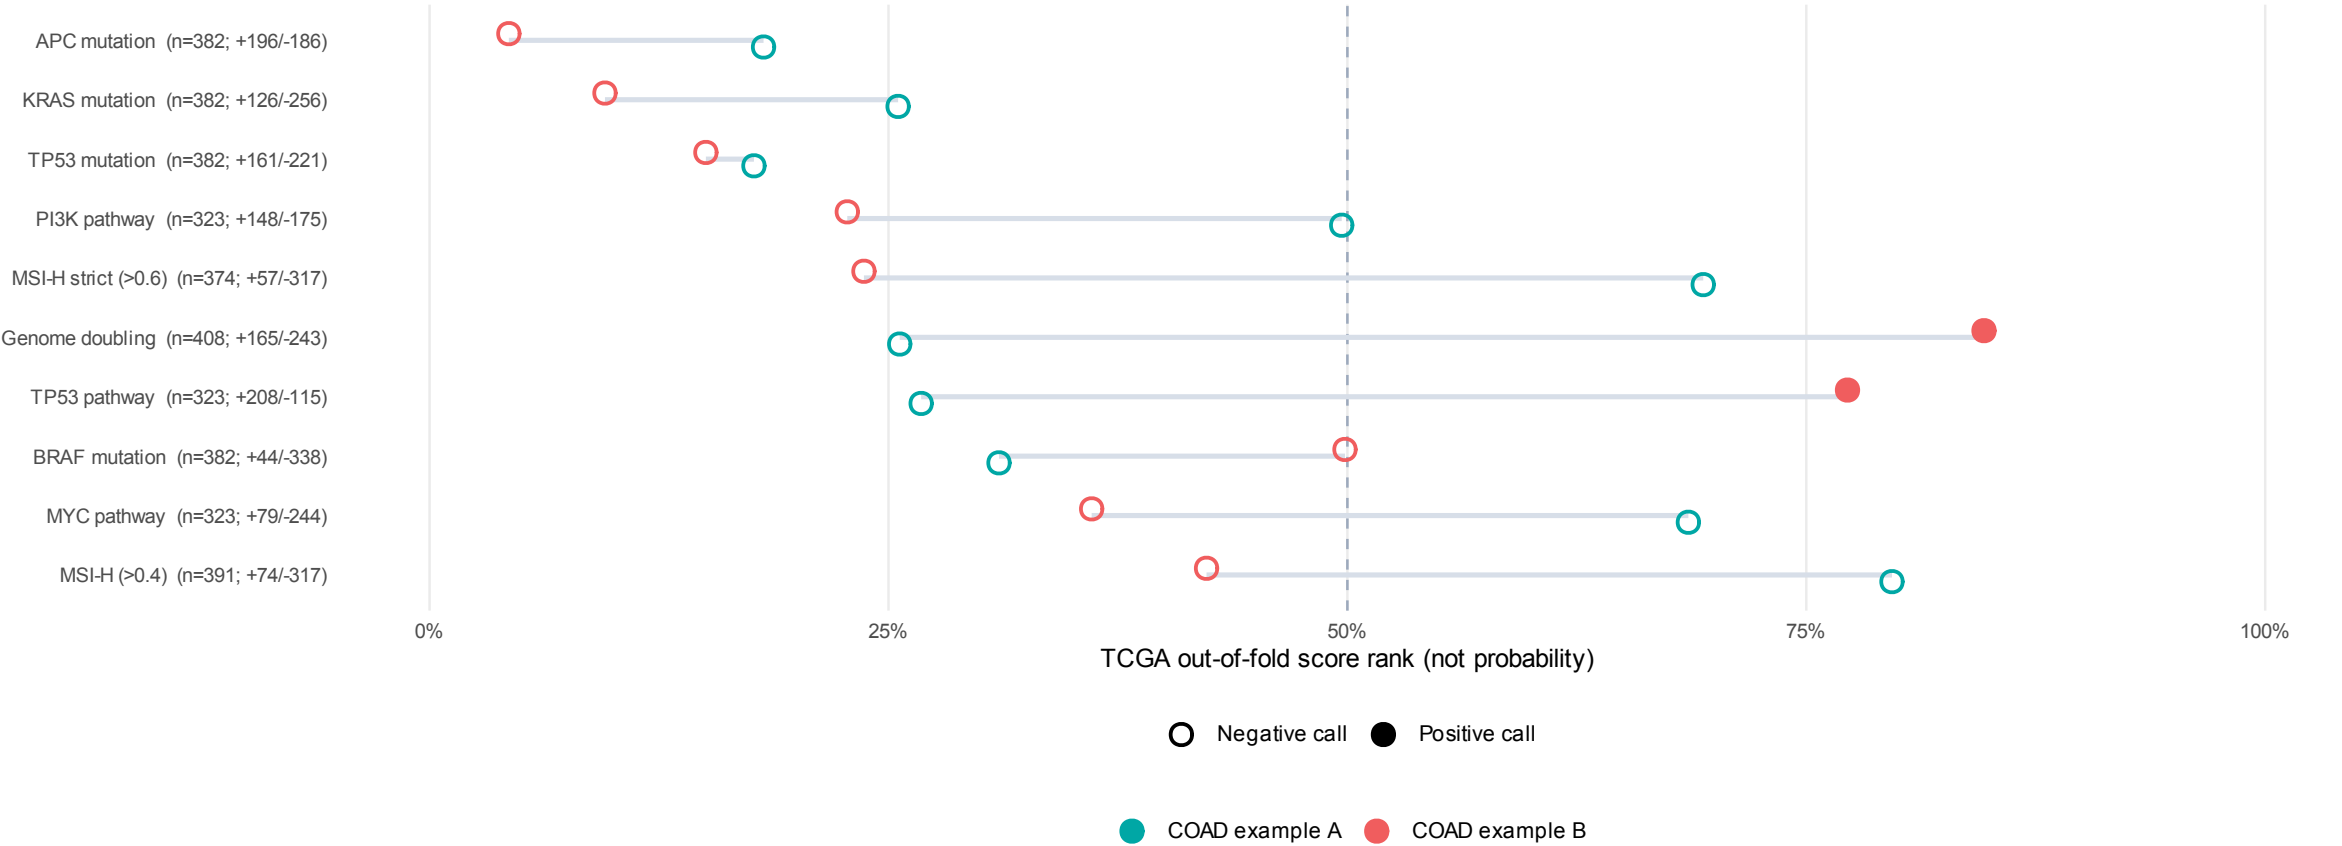

B Example B - TCGA-AA-3972

All 10 continuous predictions; exact values at radar corners

C Binary calls for the same clinically comparable cases

TCGA out-of-fold LDA-score rank; filled points are positive calls, not probabilities

Example A: TCGA-AA-A01F; example B: TCGA-AA-3972. Corner labels show TCGA reference percentile | original prediction. Binary ranks describe uncalibrated scores and are not probabilities. These full-cohort-fit examples are not validation
