

TITANPred research-software visualization: internally derived COAD estimates

Post hoc COAD cases selected after limiting profile saturation and maximising profile separation; the comparison is illustrative, not validation evidence.

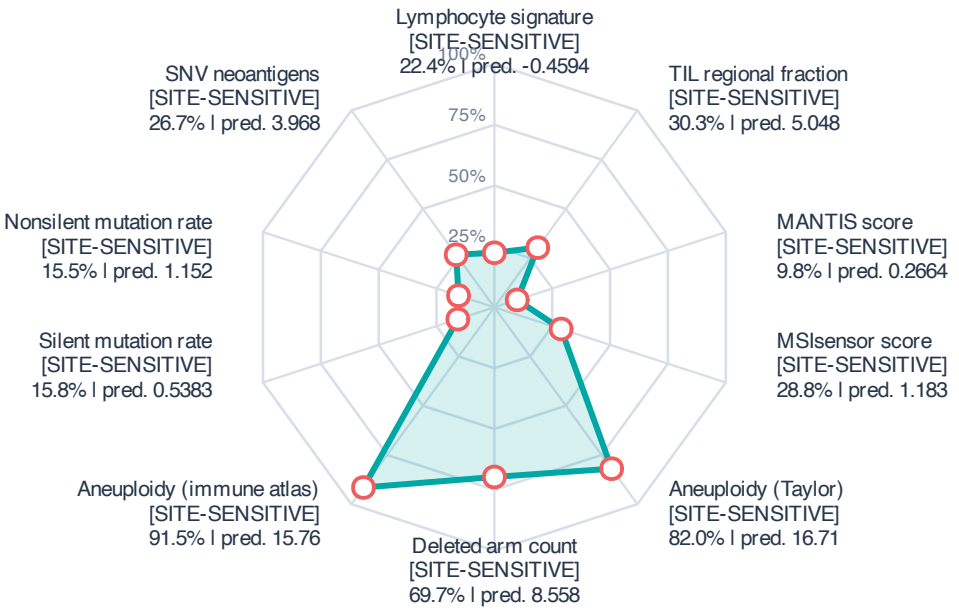

A Example A - TCGA-AA-A01F

All 10 continuous predictions; exact values at radar corners

B Example B - TCGA-AA-3972

All 10 continuous predictions; exact values at radar corners

C Binary calls for the two post hoc illustrative cases

Score rank (not probability); [SITE-SENSITIVE] models fell below their original TSS-grouped threshold
